SUMMARY

Third-year CSE (Cybersecurity) student and software engineer with strong CS fundamentals – data structures, algorithms, and OOP in C++/Python – and hands-on full-stack experience across Django, Django REST Framework, FastAPI, React, and PostgreSQL. Builds and ships features end to end (API design, testing, and CI/CD) and picks up unfamiliar codebases quickly.

EDUCATION

Dayananda Sagar University

B.Tech in Computer Science and Engineering (Cybersecurity specialization)

Bangalore, India

2024 – 2028

– Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering

EXPERIENCE

Backend Contributor (Side Project)

Jul 2025 – Mar 2026

VeerNeo (Early-Stage Generative AI Product)

Bangalore, India

– Built and iterated on backend features for an early-stage Gen AI product in a small team, shipping improvements across development cycles based on product and user feedback.

Operations Manager

Oct 2024 – Jan 2026

Entrepreneurship Cell, DSU (DERBI / AIC-DSU)

Bangalore, India

– Owned technical deliverables and timelines across two startup incubators, coordinating cross-functional teams and reporting status, blockers, and priorities to stakeholders.

PROJECTS

Public Grievance Tracker | *React, Django REST Framework, MySQL*

[GitHub](#)

- Independently built a full-stack complaint-tracking system (React, DRF, MySQL); fixed an authorization bypass on unauthenticated write endpoints (DRF token auth + endpoint permissions) and closed a PII-enumeration flaw via ownership checks.
- Cut the initial JS bundle ~74% (896 KB → 235 KB) via React route-based code splitting, atop an animated, responsive UI built with Framer Motion and React Three Fiber.
- Wrote a 25-test suite covering API permission boundaries and set up GitHub Actions CI running backend tests and frontend lint/build on every push.

Fraud Detection System | *Django REST Framework, PostgreSQL, scikit-learn*

[GitHub](#)

- Built a fraud-detection API (Django REST Framework + PostgreSQL) serving a scikit-learn ensemble (Random Forest + Gradient Boosting), trained with SMOTE against 0.17% class imbalance (0.985 ROC-AUC, 0.879 PR-AUC on held-out data); secured with API-key auth, rate limiting, and OpenAPI docs.

Web Vulnerability Scanner | *Python, Django, FastAPI, Docker*

[GitHub](#)

- Engineered a modular, Dockerized backend (Django + FastAPI) exposing REST endpoints that scan web apps for common vulnerabilities (XSS, SQLi, IDOR, open redirect) with automated PDF reporting.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, SQL, C, Bash

CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, OS, Computer Networks; active LeetCode practice

Frontend: React, JavaScript, HTML, CSS, Framer Motion, React Three Fiber

Backend: Django, Django REST Framework, FastAPI, REST APIs, PostgreSQL, MySQL

Testing & DevOps: pytest / DRF test suites, GitHub Actions (CI/CD), Docker, Git

ML / AI & Security: scikit-learn (ensembles, anomaly detection), Generative AI; web-app pentesting, vulnerability analysis

PUBLICATIONS

- Energy-Aware Edge Intelligence for Smart Cities – *IEEE ComSoc, 2026*
- Deepfake Detection Survey (adversarial media, detection countermeasures) – *BEDAIML Conference, 2026*
